

# Polsinelli Healthcare Solutions Presents: Navigating the Illinois Hospital Transformation Program

Earlier this month, the Illinois General Assembly approved the Illinois Hospital Transformation Program (the “Program”) to foster the development of innovative partnerships to “establish or improve integrated health care delivery systems that will provide significant access to the Medicaid and uninsured populations in their communities.” This program will make \$150 million in funds available annually to projects to expand access and address disparities in targeted communities. The program is currently under development by the Illinois Department of Health and Family Services (the “Department”) and we expect the Department to begin accepting proposals soon.

Polsinelli Healthcare Solutions can assist safety net and critical access hospitals and other health care providers in applying for and preparing for the Program, including strategic consulting on:

- Program eligibility;
- Identification and vetting of potential partners based on Program priorities;
- Targeted services and approaches;
- Coordination of application and program implementation;
- Implementing progress monitoring and reporting mechanisms
- Proposal development (from strategic concept development to content development and data analysis);
- Blueprints for multi-year implementation; and
- Integration of proposals into current business strategies and goals.

The Program offers a unique opportunity for health care providers to do well while doing good. Click [here](#) to receive more information about how your organization can participate in the Program.

The Illinois Hospital Transformation Program will make \$150 million in funds available annually to projects to expand access and address disparities in targeted communities.
